

Sector Policy

This policy is based on the motions made by the Council at the June 2007 Council meeting adopting the recommendations of the Sector.

Definition of “Sector”

A *sector* means a group of persons holding limited access vessel permits who have voluntarily entered into a contract and agree to certain fishing restrictions for a specified period of time, and which has been granted a TAC(s) in order to achieve objectives consistent with applicable FMP goals and objectives.

Formation of sectors

Each FMP may adopt a sector program through a plan amendment to enable limited access permit holders in the respective fishery to form sectors. In developing a sector program, the responsible species committees should adhere to the policy described in this document. Each committee should also review the Multispecies FMP sector program provisions as a basis for such a program, making modifications as needed to suit the specific fisheries.

In developing a sector program, each species committee should state the objectives of such programs specific to the FMP, and such objectives will be the context for the periodic evaluation of specific sector programs.

Each FMP must identify a single, fixed and permanent baseline for the purpose of sector allocation, but the Council recognizes that there may be reasons for exceptions. In such a situation, the respective species committee should provide the Council with the rationale for adopting multiple, movable or temporary baselines.

Individual species committees should address the question of sector size limitations in the development of their own sector programs but each FMP, with the exception of red crab, should define a minimum sector size by specifying a minimum number of participants, expressed as a number of individuals or % of permits, in order to ensure accountability among sector members, and not complicate administration or enforcement.

Individual species committees should address the geographic limitations on sectors in development of their sector programs.

Species committees should state which management measures within their respective FMPs could be eligible for exemption under sector programs, and such blanket exemptions would be subject to Council approval in the adoption of the FMP sector program.

Allocation

Individual species committees, in considering sector proposals, must consider bycatch in other fisheries, effort displacement and the impact on common pool (non-sector) vessels and any other relevant factors when allocating TAC.

Sectors will adopt Annual Catch Limits (ACLs) and Accountability Measures (AMs) for species managed under the Sector's FMP(s) and sector shares will be allocated as a percentage of the ACL of the applicable FMP. Species committees should consider stock condition in determining allocation eligibility in a manner consistent with the applicable FMPs. Sectors will adopt measures consistent with ACLs and AMS for each FMP for incidentally caught species.

Discards will not count toward a sector's allocation but discards will count against a sector's shares, unless a sector can provide other accountability for the discards and obtain an exemption. In other words, the calculation of a sector allocation, as a percentage of the total landings, would be based on historic landings only (not discards), but when the TAC is calculated each year, and a sector's catch is monitored against the TAC, both landings and discards will be counted.

Mortality Controls

Any allocation of TAC applied to a sector, when reached, would result in the sector fishery closing. Based on provisions in Multispecies Amendment 13 regarding overages by sector and non-sector vessels: if the sector does not exceed its assigned share or percentage in a given fishing year, but other sectors or the common pool do, the sector's allocation will not be reduced, if the sector exceeds its annual allocation but others do not, then the sector share will be reduced in the following year, and if all sector and open pool vessels stay within their shares, but the resource condition requires a reduction in catch, then all groups will take reductions. Individual species committees should address the regulatory response to the situation where both sector and non-sector groups exceed their portion of the total TAC in the FMPs Accountability Measures. Overages of a sector's allocation would be addressed in the annual evaluation and reauthorization process, and that individual species committees should establish the appropriate response for repeated overages, which may include disapproval of an operations plan.

In terms of mortality controls in fisheries not directly impacted by the sector fishery, each FMP sector program should require that sector applicants identify potential redirection of effort as a result of sector operations and propose limitations ("sideboards") if

necessary to eliminate any adverse effects of effort redirection.

Administrative, monitoring and other policies

Sectors will be required to report their catch annually consistent with the Multispecies FMP sector reporting requirements, and any additional monitoring requirements should be stated in each sector's Operations Plan and reviewed annually.

Each FMP may allow proposals that request authorization for multi-year operations. If a multi-year sector program is allowed, and if the range of possible changes (e.g., membership and quota) is analyzed in the Environmental Assessment (EA), then a new EA would not need to be prepared each year.

Each FMP may allow transfers of quota among sectors contingent on evaluation of proposals. If any transfers of TAC between sectors is allowed within an FMPs sector program, those transfers would be on an annual basis, and the sector TACs would be reset each year based on the membership (which might change from year to year). The FMP may also authorize sector managers to request a quota transfer between themselves, and that they may do so any time after the TAC(s) for the fishing year have been finalized. The species committees should develop FMP specific criteria for the approval or disapproval of TAC transfers. If a sector transfers a portion of its TAC to another sector, and then exceeds its remaining portion, the transferred portion would not be affected, but the sector would have its TAC reduced proportionally the following year by the amount of the overage.

Each FMP should state that vessel can only be in one sector within that FMP in any fishing year. Furthermore, a vessel cannot be in more than one sector in different FMPs in the same year.

Each sector is responsible for ensuring that their eligibility criteria are implemented in a fair and uniform manner.

Species committees should adhere to the policy and guidelines described above, and wherever they deviate from these, should provide substantial rationale for such variance to the Council for its consideration and approval.
